Extra: thinking about climate change - Part I

Moral Imperative Around Climate Change - Francis

Given as a TED Talk Countdown, and free of any particular 'religious' language but instead addressed to anyone of 'faith' and those of none, this recent statement from Pope Francis is worth sharing. In Italian but with clear subtitling, it is about the global climate crisis that 'will require us to transform the way we act'. A key phrase for him is the notion of *integral ecology*, which he explains and for which he proposes three courses of action, with particular attention to *our agency* in both the challenges we face and the solution to them. In the context of inequity and self-interest, both of which he addresses directly, he speaks of the vital importance of protecting the Earth and promoting the dignity of everyone. (12min 54sec)

For easy reference - LCL fully explained

With more detail on the LCL Framework and each of the 5 'causes of life', and rich cross-referencing to many seminal studies and bodies of research, this is on the LCL website but you might like to have a close look at it again. Here then is a quick link to it:

- LCL Statement -
